

CipherPoint Software Enables Compliance And Secures Sensitive Content Stored in SharePoint

Company Launches CipherPointSP Enterprise™ and CipherPointKM™ Content Security Solutions for SharePoint

October 18, 2010, Austin, TX: CipherPoint Software announced today the immediate availability of two products which bring enterprise-class content security to customers using Microsoft SharePoint.

CipherPointSP Enterprise is a transparent content encryption software solution for SharePoint. CipherPointKM is a central security console providing advanced key management and administration capabilities for multiple SharePoint servers running CipherPointSP Enterprise.

The CipherPoint solution is the first enterprise-class content security solution for SharePoint. CipherPoint Software's approach delivers transparent encryption for sensitive and confidential content, with no client software required, and no user interaction required. CipherPoint Software's products enable compliance with multiple regulations (including PCI DSS, GLBA, HIPAA, and state data privacy laws) requiring encryption of sensitive and confidential information. The products provide an effective solution to protect against the insider threat within any SharePoint environment while enforcing separation of duties and need to know among business users, information security personnel, and the various SharePoint administrators.

"CipherPointSP Enterprise and CipherPointKM deliver truly transparent, server-side content encryption, and they address a serious and previously unsolved security problem for SharePoint, the insider threat," said Dave Conder, CTO, BlueModus, a Microsoft Gold SharePoint partner.

Users of SharePoint interested in learning more about the CipherPoint solution should visit CipherPoint's website at: <http://www.cipherpointsoftware.com>.

Free downloads of trial versions of the software are available from the website:
